**specifications:**

Global Contract's Task Lighting throws light on your most difficult jobs.

Designed by Johnathan Crinion and winner of a Canadian design award, this light provides high-quality illumination for any work area. Mount it under storage or shelves for an even, diffused light – it reduces reflection and glare.

FEATURES

*The design of Global Contract's Task Lighting offers benefits that make it a class leader.*

*It comes standard in the following finishes: black, charcoal, taupe, silver and nevada, with optional accent colors of purple, mustard and red (in quantities of 50 or more).*

BLUSPLS  
 OCCUPANCY SENSOR

*This unique option is a custom, state-of-the-art sensor that performs flawlessly to operate the light only when needed – leave your workstation and the light automatically shuts off. This energy-saving feature will reduce costs and continue to pay investment returns year after year. The sensor lens was exclusively created using renowned Fresnel Technology.*

**Electronic Ballast**

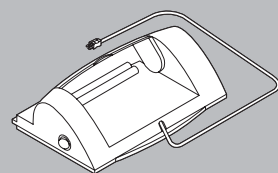

*An electronic ballast offers many benefits over the standard electromagnetic ballast. Both noise and flicker are virtually eliminated and the fixture weighs less, runs cooler, and is more tolerant of line voltage drops. In an unparalleled achievement, this light uses the standard, 13 watt, 2 pin compact fluorescent twin tube over the 4 pin type that is not readily available.*

OPTIONS

**Chicago Cord**

*The City of Chicago requires overload protection on each task light unit. To meet this standard, our light can be fitted with a cordset that includes a 2.5 Amp circuit breaker on the plug.*

*The shell of Global Contract's Task Lighting is injected molded plastic. The cord manager is included and a rocker switch of non-conductive plastic is at the end of the fixture. Approved to UL and CSA standards.*

*The accompanying mounting kit attaches quickly to any Boulevard cabinet and the light can be mounted mechanically or by magnet. With metal overheads, this light can be easily moved from side to side. The adjustable louver retracts to customize light levels on the work surface.*
