

GLOBAL CONTRACT SHOWN AT IIDEX 2008 --'BRIDGES' POWER TROUGH

MARKET APPLICATION

Linear assembly of back-to-back 'VICEVERSA BRIDGES™' workstations.

DESIGN + INNOVATION

BRIDGES POWER TROUGH provides power distribution and data cable management to BRIDGES Tables back-to-back. Steel troughs support integrated, shielded four-circuit power delivery. They also provide dual sided shelves for managing excess equipment cables or a simple, extension cord. Cables can be neatly organized and captured by the lay-in troughs, suspending the cable bundles between the workstations. Material and construction choice allows for easy disassembly and recycling at the end of product's life cycle.
